

#### Assignment no.4

Q. Create program to get the employee details

Code:

```
import java.util.Scanner;

class info {

    private String name;

    private int phoneno;

    private int empid;

    private float salary;

    private String city;

    public void acceptRecord() {

        Scanner sc = new Scanner(System.in);

        System.out.println("name: ");

        name = sc.nextLine();

        System.out.println("city: ");

        city = sc.nextLine();

        System.out.println("phoneno: ");

        phoneno = sc.nextInt();

        System.out.println("Empid:");

        empid = sc.nextInt();

        System.out.println("Salary: ");

        salary = sc.nextFloat();

        sc.close();

    }

    public void printData() {

        System.out.println("Name: " + name);
```

```

        System.out.println("city: " + city);

        System.out.println("phone no: " + phoneno);

        System.out.println("empid : " + empid);

        System.out.println("salary: " + salary);

    }
}

```

```

public class Employee {

    public static void main(String[] args) {

        info e1 = new info();

        e1.acceptRecord();

        System.out.println();

        e1.printData();

        System.out.println();

        info e2 = new info();

        e2.acceptRecord();

        System.out.println();

        e2.printData();

    }

}

```

Output:

```
> cd "c:\Users\hp\Desktop\core Java\" ; if ($?) { javac Employee.java } ; if ($?) { java Employee }
```

name:

h

city:

n

phoneno:

345

Empid:

1

Salary:

56789

Name: h

city: n

phone no: 345

empid : 1

salary: 56789.0

name:

ram

city:

mumbai

phoneno:

45367

Empid:

2

Salary:

456787

Name: ram

city: mumbai

phone no: 45367

empid : 2

salary: 456787.0

PS C:\Users\hp\Desktop\core Java>
